

# Classification of Whiskies

## Data Source

[University of Strathclyde, Dept of Statistics](#)

## Description

86 malt whiskies are scored between 0-4 for 12 different taste categories including sweetness, smoky, nutty etc. In addition, coordinates of distilleries are provided us to obtain pairwise distance information. Using a combination of these datasets it is possible to look for correlations between particular attributes of taste and physical location, for example does a shared local resource have a significant effect on nearby whiskies.

## Files Provided

- **whiskies.csv**: scores for 86 whiskies measured in various taste categories
- **description.md**: this file

## Data Dictionary

- **RowID**: (integer) index
- **Distillery**: (string) name of distillery
- **Body**: (integer) taste score between 0-4
- **Sweetness**: (integer) taste score between 0-4
- **Smoky**: (integer) taste score between 0-4
- **Medicinal**: (integer) taste score between 0-4
- **Tobacco**: (integer) taste score between 0-4
- **Honey**: (integer) taste score between 0-4
- **Spicy**: (integer) taste score between 0-4
- **Winey**: (integer) taste score between 0-4
- **Nutty**: (integer) taste score between 0-4
- **Malty**: (integer) taste score between 0-4
- **Fruity**: (integer) taste score between 0-4

- **Floral:** (integer) taste score between 0-4
- **Postcode:** (integer) taste score between 0-4
- **Latitude:** latitude of distillery in Great Britain's Ordnance Survey National Grid reference system
- **Longitude:** longitude of distillery in Great Britain's Ordnance Survey National Grid reference system
